

# Texa IDC4 Firmware Update Instructions

NB. You must have followed the Bluetooth pairing procedure before updating firmware

- 1 Load Texa from the icon from your desktop 
- 2 Select the vehicle category you would like to update  
- Truck , Car or Agri 
- 3 Press the **settings** icon 
- 4 Now you will be prompted for a password.  
Please bring up your onscreen keyboard and enter **1236** 
- 5 On the next screen please click on the **Service Programs** button. 
- 6 Click on **Self-diagnosis function** to highlight it 
- 7 Press **enter** on the bottom right 
- 8 You should now see your device with a green tick on the right of it 
- 9 Click **Next** on the bottom right 
- 10 Click **UPDATE** and then **NEXT** buttons.  
**NB.** In Truck, update is the bottom of the two Enable Adjustments buttons – it changes to update when you use it. 
- 11 A warning will appear showing you the current firmware update. Click **NEXT** to continue with the update 
- 12 Just click **NEXT** to confirm that the update was successful.  
  
You're done! Close the window using the cross in the top right and use your newly updated diagnostics kit.
